### REASONS FOR ALLOWANCE

1. Claims 4 and 5 have been amended. Claims 1-3 have been cancelled. Claims 4-6 are pending.

2. The objections to Specification are WITHDRAWN in view of the Amendment.

3. Applicant's arguments, see page 7-10 of Remarks, filed 23 February 2006, with respect to claims 4-6 have been fully considered and are persuasive. The 35 U.S.C. 103(a) rejections of claims 4-6 have been withdrawn.

4. Claims 4-6 are allowed.

5. The following is an examiner's statement of reasons for allowance:

Claims 4-6: The closest prior art to the Applicant's invention are discussed below:

Honma et al. does not teach one of the at least two conductive electrodes is inserted into each of the at least two through holes of the fixed base from an interior of the casing and protruding from the casing; each of the at least two conductive electrodes being movable between compressed and extended positions and having a flange limiting a length of outward movement in the extended position; one of the at least two elastic members having a first end pressing outwardly against an interior of each of the at least two conductive electrodes and a second end connected to the micro alternate current generator and the alternate current resistance measuring circuit; nor do Honma et al. teach, when the electrodes engage the skin, the at least two elastic members providing a constant pressure between the skin and the at least two conductive electrodes.

Arai et al. does not teach one of the at least two conductive electrodes is inserted into each of the at least two through holes of the fixed base from an interior of the casing and protruding from the casing', each of the at least two conductive electrodes being movable between compressed and extended positions and having a flange limiting a length of outward movement in the extended position', one of the at least two elastic members having a first end pressing outwardly against an interior of each of the at least two conductive electrodes and a second end connected to the micro alternate current generator and the alternate current resistance measuring circuit; nor do Arai et al. teach, when the electrodes engage the skin, the at least two elastic members providing a constant pressure between the skin and the at least two conductive electrodes.

Even if the teachings of Homma et al and Arai et al were combined, the resultant combination would not teach or suggest: one of the at least two conductive electrodes is inserted into each of the at least two through holes of the fixed base from an interior of the casing and protruding from the casing.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
